

Video playback is now an integral part of most lighting shows. Media Servers are commonly used to provide the video content and Clarity has always been a leader in the integration of media server control.

The dedicated Media Server window provides a visual interface complete with thumbnails of all video content, which is downloaded automatically from the Media Server over the ethernet network. Clarity currently supports Arkaos, Catalyst, Coolux Pandora's Box, Hippotizer, Mbox Extreme, Robe Digispots - and we will add other brands as soon as they allow.
