

LSC Lighting Systems is proud to announce the release of their latest lighting controller, the Mantra Lite.

Designed to control any type of fixture including LEDs and moving lights, Mantra's App-like user interface and simple programming platform enables any novice to make a great lighting show.

The unique 'Animate' function is a powerful FX engine and allows the user to easily create complex colour, intensity and position chases in seconds without having to understand or manipulate any of the technology "underneath the hood". Literally anyone can do it.

The Mantra offers control of up to 24 fixtures of any type and is expandable up to 48 fixtures via external USB wings (due for release in Q2, 2016).

With 10 Playbacks over 10 pages, dedicated Flash buttons and 250 Cues per Cuelist, Mantra provides everything needed for a great production on a tight budget.

Whether it's your annual school or church production or lighting the next generation of Rock legends at your local pub/club, you'll agree with the Mantra, "Lighting is now Easy"

LSC will be showing the Mantra at the PLASA tradeshow beginning Sunday October 4. More information on this site [here](#).
